

AURO

Overview of our product range “Furniture and wooden surfaces”

Tipps for application

Wood and wooden materials can be treated with AURO products from the Furniture and Wooden Surfaces range in many ways. Among the various possibilities there are Woodstain coatings as well as lacquer paint treatments or oil and wax applications.

The natural raw materials in our products make it easy to go green: Wood treated with Auro products, as well as residues of the products, can be composted in dried state without any harm to the environment. They just return into nature's cycle of materials.

The following pages show an overview of the products and their fields of application. Please consider that nature, structure and absorbency of the substrate can influence the actual coating, as can substances contained in the substrate.

Before large-scale application of the products we therefore recommend a pretest on a small spot to see if the desired result is achieved. The single application steps and the respective products are not obligatory but dependent on the given on-site situation.

Please buy products with the same batch numbers. Colour tones can vary slightly from one batch to another because natural raw materials are used in the products.

The product systems and their characteristics:

PurSolid: The colour tone of the surface gets slightly “fired” or “primed”. The products contain neither organic, volatile solvents nor water. PurSolid products are extremely economic.

Aqua: The surface maintains a more natural, less „fired“ appearance. These low-odour products are free from organic solvents.

Classic: The surface takes on a light honey tone. The products contain a mixture of essential oils as natural solvent and dry very quickly.

Please also consult out Technical Data Sheets for the products mentioned.

Our website www.auro.de/en always has the latest technical information, as well as tips and tricks for product applications.
